Practice Guidelines for Obstetric Anesthesia: An Updated Report
American Society of Anesthesiologists

Bibliography in Alphabetical Order

34. Boselli E, Debon R, Cimino Y, Rimmele T, Allaouchiche B, Chassard D: Background infusion is not beneficial during labor patient-controlled analgesia with 0.1% ropivacaine plus 0.5 microg/ml sufentanil. Anesthesiology 2004; 100: 968-72

50. Cassidy B, Cyna AM: Challenges that opioid-dependent women present to the obstetric anaesthetist. Anaesth Intensive Care 2004; 32 494-501
58. Chestnut DH, McGrath JM, Vincent RD, Jr., Penning DH, Choi WW, Bates JN, McFarlane C: Does early administration of epidural analgesia affect obstetric outcome in nulliparous women who are in spontaneous labor? Anesthesiology 1994; 80:1201-1208
59. Chestnut DH, Owen CL, Bates JN, Ostman LG, Choi WW, Geiger MW: Continuous infusion epidural analgesia during labor: a randomized, double-blind comparison of 0.0625% bupivacaine/0.0002% fentanyl versus 0.125% bupivacaine. Anesthesiology 1988; 68:754-759

73. Combs CA, Murphy EL, Laros RK, Jr: Factors associated with hemorrhage in cesarean deliveries. Obstet Gynecol 1991; 77:77-82

75. Comparative Obstetric Mobile Epidural Trial (COMET) Study Group UK: Randomized controlled trial comparing traditional with two "mobile" epidural techniques: anesthetic and analgesic efficacy. Anesthesiology 2002; 97:1567-1575

86. Crites J, Ramanathan J: Acute hypoglycemia following combined spinal-epidural anesthesia (CSE) in a parturient with diabetes mellitus. Anesthesiology 2000; 93:591-592
95. de Mello WF, Kocan M: The laryngeal mask in failed intubation. Anaesthesia 1990; 41:689-690

117. Ekerhovd E, Bullarbo M: Sublingual nitroglycerin seems to be effective in the management of retained placenta. Acta Obstet Gynecol Scand 2008; 87:222-225

136. Fujii Y, Tanaka H, Toyooka H: Prevention of nausea and vomiting with granisetron, droperidol and metoclopramide during and after spinal anaesthesia for caesarean section:

189. James KS, McGrady E, Quasim I, Patrick A: Comparison of epidural bolus administration of 0.25% bupivacaine and 0.1% bupivacaine with 0.0002% fentanyl for analgesia during labour. Br J Anaesth 1998; 81:507-510

223. Lee BB, Ngan Kee WD, Ng FF, Lau TK, Wong EL: Epidural infusions for labor analgesia: a comparison of 0.2% ropivacaine, 0.1% ropivacaine, and 0.1% ropivacaine with fentanyl. Reg Anesth Pain Med 2002; 27:31-36

252. Margarson MP: Delayed amniotic fluid embolism following caesarean section under spinal anaesthesia. Anaesthesia 1995; 50:804-806

266. Mhyre JM, Bateman BT, Leffert LR: Influence of patient comorbidities on the risk of near-miss maternal morbidity or mortality. Anesthesiology 2011; 115:963-972

351. Ramanathan J, Sibai BM, Vu T, Chauhan D: Correlation between bleeding times and platelet counts in women with preeclampsia undergoing cesarean section. Anesthesiology 1989; 71:188-191

401. Sia AT, Chong JL: Epidural 0.2% ropivacaine for labour analgesia: parturient-controlled or continuous infusion? Anaesth Intensive Care 1999; 27:154-158
431. Tsen LC, Cherayil G: Sickle cell-induced peripheral neuropathy following spinal anaesthesia for cesarean delivery. Anesthesiology 2001; 95:1298-1299
432. Tsen LC, Thue B, Datta S, Segal S: Is combined spinal-epidural analgesia associated with more rapid cervical dilation in nulliparous patients when compared with conventional epidural analgesia? Anesthesiology 1999; 91:920-925
