Figure 1. Person-item map of the six subscales of the QOLIBRI. The left-hand column of each map shows the distribution of person ability along the latent variable; the right-hand column shows the items positioned at a median 50% cumulative probability (the Rasch-Thurstone thresholds) at the lower edge of each rating probability zone. The labels of the item refer to the levels of the rating scales. For instance, C3.5 indicates the 5th level (very satisfied) of item 3 (remembering) under Cognition; S1.2 indicates the 2nd level (slightly satisfied) of item 3 (energy) under Self.
