Records identified through PubMed ($n=261$) and Web of Science ($n=157$).

- Records after duplicates removed ($n=366$)
- Records screened ($n=366$)
- Full-text articles assessed for eligibility ($n=64$)

Additional studies identified after assessing reference lists of eligible studies (Kvaskoff et al, Cramer et al) ($n=2$)

- Studies identified as meeting eligibility criteria ($n=19$)
- Studies included in qualitative synthesis ($n=21$)

- Records excluded ($n=302$)
  - Intervention ($n=25$)
  - Endometriosis diagnosis was not the outcome ($n=18$)
  - No adiposity measure data included ($n=6$)
  - Review article ($n=8$)
  - Case report ($n=14$)
  - Test of diagnostic tool ($n=15$)
  - Non-human sample ($n=56$)
  - Assessed biological mechanisms of endometriosis ($n=17$)
  - No comparison group ($n=3$)
  - Letter to the editor ($n=1$)
  - Combination of reasons (e.g., intervention and not available through NIH Library) ($n=139$)

- Full-text articles excluded ($n=45$)
  - Only included BMI data ($n=34$)
  - No adiposity measure data included ($n=5$)
  - Non-human sample ($n=1$)
  - No comparison group ($n=4$)
