SDC Figure S1: C-peptide, HbA1c, coefficient of variation (CV) of fasting glycemia and daily insulin dose during 5 year follow-up after islet transplantation for the group of patients with continuous tacrolimus therapy (full circles, full line, n = 27) and for the group of patients where tacrolimus was stopped after graft failure (open square, dotted line, n = 21). Statistical difference compared to before transplantation: * p<0.05, ** p<0.005. Statistical difference between groups: # p<0.05, ## p<0.005. Data are mean +/- SEM.
