Supplemental Digital Figure 2. Comparison by group of change in mean self-assessed Mentoring Competency Assessment composite score overall and by gender and title. Mean change in the intervention (“I”) and control (“C”) groups and the point estimate and 95% confidence interval for the difference between groups (“Diff”) are given from pre-test to post-test (“Pre to post change”). The interaction $P$ value (“Int. $P$”) tests whether the intervention effect differs across the indicated subgroups.
