<tbody>
<tr>
<td>Feb 2012</td>
<td><strong>Concept genesis.</strong> Medical student (TB) attends misplaced NG tube RCA workshop, resulting in TB generating an innovation for promoting pH as the first line method</td>
<td>RCA NG tubes scenario using:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Timeline</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Swiss Cheese Model (active and latent failures)¹</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Contributory factors (Organisational accident model; Fishbone diagram)²</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Seek user input</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Involve users early and often</td>
</tr>
<tr>
<td>Apr 2012</td>
<td><strong>Initial collaboration.</strong> Curriculum leads facilitate contact between TB, AC and NG Steering Group</td>
<td>- Follow industry conventions and consensus standards (e.g.,⁴)</td>
</tr>
<tr>
<td>Apr 2012</td>
<td><strong>NG Steering Group meeting.</strong> Discussed key features of the pack in relation to context of use.</td>
<td>- Facilitate workflow</td>
</tr>
<tr>
<td>Apr 2012</td>
<td><strong>NG Tube Pack proposal development.</strong> A proposal for potential manufacturing partners was developed by TB, AC and NT</td>
<td>- Review and simplify work processes; Standardise common processes</td>
</tr>
<tr>
<td>Jun 2012</td>
<td><strong>Initial contact with industry.</strong> Met with procurement manager who put us in touch with Enteral UK</td>
<td>- Design to prevent user confusion</td>
</tr>
<tr>
<td>Jun 2012</td>
<td><strong>Initial NG Tube Pack proposal submission.</strong> Proposed contents included:</td>
<td>- Anticipate device failures and procedures</td>
</tr>
<tr>
<td></td>
<td>- NG tube: This should not have the label attached which states the tube should be flushed after insertion – a contributing factor to NG accidents.</td>
<td>- Follow industry conventions and consensus standards</td>
</tr>
<tr>
<td></td>
<td>- Purple Syringe for aspiration; Nasal Plaster to hold tube in place; Gloves; pH paper with increments of 0.5 and CE marked; A warning related to NPSA alert – re risk of harm</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Red, Amber, Green stickers to prompt the clinician to make sure that vital stages in NG tube positioning are completed. The stickers could possibly be attached to the NG tube itself or alternatively be directly stuck into the patient’s notes. Options are for the Red, Amber, Green messages to be implemented either as a sticker system on tube OR</td>
<td></td>

</table>
| Jun 2012  | **Industry meeting.** Entered agreement with Enteral UK to work together to develop prototype | - Facilitate workflow  
- Review and simplify work processes  
- Standardise common processes  
- Consider the potential for device to be used in other environments |
| Oct 2012  | **Prototype review meeting.** Wording on prompt card reviewed and revisions made |  |
| Nov 2012  | **Product development meeting**  
- Considered whether or not to include pH paper in the pack due to use of a range of pH paper types within different organisations.  
- Sticker on the tube was deemed to potentially be more hazardous and was progressed into a prompt card in the pack.  
- The pack was initially more geared towards specific Trust guidelines, but wording was edited to make it more applicable to Trusts nationwide. |  |
| Dec 2012  | **Advisory board meeting.** Nutritional nurses who reviewed the pack in the earlier stages recommended, “For the hospital due to cost and accessibility the pack should include the literature, measure tape and a dressing. No pH paper advised” | - Refine designs through formative usability testing  
- Accommodate user needs and preferences  
- Consider external factors that influence task performance  
- Consider the potential for device to be used in other environments |
| Jan 2013  | **Product development.** Prompt card heavily revised via assessment of prototypes and email communication. | - Facilitate workflow  
- Review and simplify work processes  
- Standardise common processes  
- Consider appeal |
| May 2013  | **Pilot of NG Tube pack.** Improvement from 71-100% pH check first line in the pilot ward; consultation exercise undertaken by medical student, e.g.: | - Refine designs through summative usability testing  
- Do not exclusively rely on ‘thought leaders’ |

Abbreviations: TB indicates Thomas Bamford (manuscript author); NG, nasogastric; RCA, Root Cause Analysis; AC, Alison Cracknell (manuscript author); NT, Natalie Taylor (manuscript author; UK, United Kingdom; NPSA, National Patient Safety Agency; CE European conformity.)
Reference List for Supplemental Digital Appendix 1

Step 1. Placing NG tube

1. Obtain Informed Consent or best interest decision made
2. Prepare Equipment
3. Prepare Patient
4. Take NEX Measurement (as seen on Diagram 01)
5. Insert NGT
6. Aspirate and follow traffic light
7. Remove Guidewire (If NG tubes is Radio-opaque guidewire not needed for X-ray confirmation. Refer to local policy)

NB: Placement and on-going checks MUST be recorded in patients notes as per local policy!

Rapid Response Report
NPSA/2012/RRR001 states:

- **NOTHING** should be introduced down the tube before gastric placement has been confirmed
- **DO NOT FLUSH** the tube before gastric placement has been confirmed
- Internal guidewires/stylets should **NOT** be lubricated before gastric placement has been confirmed

Step 2. How To Check NG Tube Position At Initial Placement

Confirmation on method according to patient safety alert NPSA/2011/PSA002

- **√ NEX Measurement**
  - Correct As per Diagram 01

- **CHECK ASPIRATE**
  - **√ pH value obtained indicates safe to feed as per local policy**
  - **IT IS SAFE TO FEED**

- **NO ASPIRATE**
  - No coiling in mouth
  - Change patient position
  - Perform mouth care
  - Flush NGT with AIR
  - Offer drink if patient has a safe swallow
  - Wait at least 15-30 minutes
  - Advance or withdraw NGT
  - Problem solving solutions as per Diagram 02

- **RE-ASPIRATE AFTER EACH TECHNIQUE**

DO NOT FEED IF:

1. NO aspirate or
2. pH value GREATER than pH level agreed for safe feeding in local policy*

REQUEST AN X-RAY

X-ray position must be confirmed by someone trained and assessed to do so

* NPSA Alert NPSA/2011/PSA002 States pH 5 or less is safe to feed, between pH value 5-5.5 a check is require by second competent person.
Diagram 01

HOW TO TAKE NEX MEASUREMENT

N: NOSE
E: EARLOBE
X: XYPHOID

Diagram 02. TIPS if Aspirate is difficult to obtain

Tube may be above fluid level

Turn patient onto their side
This may allow the tip of the nasogastric tube to enter the gastric fluid pool.¹

Tube may be in the small bowel

pH will normally be 6-8 and bile will usually be present.
Withdraw tube in 2-3cm increments testing at each increments up to 20cm.

Tube may be occluded in Mucosa

Advance or withdraw tube 5cm or aspirate with smaller syringe. Change patients position to alternative side.
Refer to local policy!

Tube may be in Oesophagus

Advance the tube by 1-2cm for infants and children or 10-20cm for adults advancing the tube may allow it to pass into the stomach if it is in the oesophagus. Refer to local policy!¹

There may be no fluid in the stomach

Having injected air and tried smaller syringe wait 15-30 minutes, change patients position to alternative side.

Tube may be occluded

Tube may be kinked or occluded with debris.
Inject air (1-5ml for children, 10-20ml for adults) using a 20ml or 50ml syringe and try again. Refer to local policy!¹

¹ This is NOT a testing procedure: DO NOT carry out auscultation of air ('whoosh' test) to test tube position. Advice does not replace local policy's!
Tender Grip®
Skin Fixation System

Tender Grip® is easy to apply, allows the skin to breath, holds securely and leaves the fixed tube clean and without messy residues.

- Time Saving
- Cost Effective
- Secures tubing in place
- Reduces trauma of reapplication

Tender Grip® consists of an adhesive “round” of microporous tape (position tube over base layer) which is applied to the patient’s skin. On top of the tape base is a fixation tab designed to position and secure tubing in place.

How to Read Enteral pH Strip

Place sample of aspirate on all three test pads
Wait 10-60 seconds until colour no longer changes
Match strip to scale on Enteral pH® container
