Supplementary Figure 1: Effects of 48 hours of 100 uL of Methotrexate (MTX at 100uL) ± gefitinib (at 2, 4 and 8 uM concentration) treatment on the viability of (A) JEG3 (B) syncytialised BeWo and (C,D) 1st trimester primary trophoblast cells. A-D are representative of at least two independent experiments. Mean ± standard error of the mean shown. Groups were analysed with a two way ANOVA and post-hoc T-tests: *p ≤ 0.05 vs control, **p ≤ 0.01 vs control, ***p ≤ 0.001 vs controls, #p ≤ 0.05 vs MTX 100uL, ##p ≤ 0.01 vs MTX 100uL, ###p ≤ 0.002 vs MTX 100uL, ≠p ≤ 0.05 vs MTX 10uL, ≠≠p ≤ 0.01 vs MTX 10uL, ≠≠≠p ≤ 0.001 vs MTX 10uL.
