Appendix 1. Tree diagram. Each strategy except C is collapsed down, but is identical in structure to Strategy C.
Strategy A: type and screen for low or moderate risk, type and crossmatch for high risk. Strategy B: type and screen all. Strategy C: hold clot for low or moderate risk, type and crossmatch for high risk. Strategy D: type and screen only for high risk. Strategy E: no routine admission testing.
Appendix 3. Incremental cost-effectiveness ratio tornado diagram: Strategy C (hold clot) compared with Strategy E (no routine admission testing).
