

Fig. E-1

Scatterplot showing the SF-36 (Physical Function [PF]) score compared with (**Fig. E-1A**) the raw high-intensity step count ($R = 0.32$; $p = 0.055$) and (**Fig. E-1B**) the log scale of the high-intensity step count ($R = 0.46$; $p = 0.004$) to demonstrate the effect of the log transform. Circled points are examples of data outliers.
