

TABLE E-1 Complications and Reoperations

Gender	Age (yr)	Fusion Group	Complication	Reoperation or Treatment
F	12.7	Anterior	Postoperative peroneal paralysis	Later subtalar arthrodesis
F	12.9	Anterior	Postoperative radicular pain to both S1 dermatomes	Bilateral S1 root decompression
F	15.5	Anterior	New radicular pain to L5 dermatomes six months postoperatively	Bilateral L5 root decompression and posterolateral fusion two years postoperatively
F	15.1	Anterior	Postoperative radicular pain to the right S1 dermatome; computerized tomographic scan revealed osseous loose fragment compressing the S1 root	L5 laminectomy and removal of the loose fragment
F	10.3	Circumferential	Postoperative scoliosis, walking difficulties, and pain	Five reoperations, including reduction trials with internal and external fixator and repeat spondylosis both anteriorly and posteriorly
F	16.5	Circumferential	Pseudarthrosis	Symptom-free, no treatment
M	16.1	Circumferential	Postoperative wound infection	Antibiotic treatment
M	13.9	Posterolateral	Pseudarthrosis	Symptom-free, no treatment
F	14.5	Posterolateral	Pseudarthrosis	Symptom-free, no treatment
M	13.8	Posterolateral	Pseudarthrosis	Repeat spondylosis two years postoperatively
