Fig. S3 ROC curve analysis of anti-inflammatory biomarkers for the diagnosis of CAD. The values of IL-37 (AUC 0.908, 95% CI: 0.863-0.952) were more accurate than that of NTN1 (AUC 0.771, 95% CI: 0.703-0.890) and ADP (AUC 0.870, 95% CI: 0.820-0.920). The optimal cutoff value of IL-37 was 140.86 ng/mL.
