317 patients identified by electronic record querying

122 patients excluded because PE was not the main admission diagnosis

195 patients with a main admission diagnosis of PE

87 patients excluded for missing data

108 patients included
The bar chart compares the number of patients for different imaging tests between two time periods:

- **<=2008 (n=55)**
- **>=2009 (n=53)**

The tests compared are:

- CT scan
- Cardiac US
- Scintigraphy

The chart shows a higher number of patients for CT scan in both time periods, with a significant increase after 2009. Cardiac US has a lower number compared to CT scan, and scintigraphy shows the least number of patients across both periods.
