Supplemental Digital Content 7: Forest plot for meta-analysis of 9 comparative studies on SHBG concentrations in women with POI/POF compared with fertile controls. Squares represent effect of each study, and the diamond represents the overall effect of the study at 95% confidence intervals. The values to the left of the solid line indicate SMD less than 1, decreased concentrations in POI/POF group. The values to the right of the solid line indicate SMD greater than 1, increased concentrations in POF/POI compared to the control group.
