Correlation of Serum and Ascitic Fluid SuPAR Levels With Patient Complications, Disease Severity, Inflammatory Markers, and Prognosis in Patients With Severe Acute Pancreatitis

SUPPLEMENTAL DIGITAL CONTENT

SUPPLEMENTARY FIGURE 1. ROC curve analysis of APACHE II, Ranson, Balthazar, and SOFA scores for risk of severe complications. A, ROC curves for pancreatic necrosis risk; B, ROC curves for pancreatic infection risk; C, ROC curves for MODS risk. Predicting value was determined by ROC curve analysis. ROC indicates receiver operating characteristic; APACHE, acute physiology and chronic health evaluation; SOFA, sequential organ failure assessment; MODS, multiple organ dysfunction syndrome.
