

Zinter et al. Cumulative Fluid Balance is Associated with Mortality in Pediatric ARDS in the Setting of Acute Kidney Injury.

Figure E1) Nutrition Source in Pediatric ARDS

Legend: 22% of patients received some form of enteral nutrition on ARDS day 1. This number increased to 36% of patients on ARDS day 2 and to 45% of patients on ARDS day 3, which represents a statistically significant increase over time ($p < 0.001$ by Wilcoxon rank-sum nonparametric test).
