NOTE: A sqrt(x) transformation was used to calculate appropriate control limits. These limits may not be equidistant from the centerline.
**Legend Supplemental Control Chart.**

This I-chart demonstrates the sustainability of our QI project. We have sustained our improvement through 2014 and 2016 with an occasional outlier. In early 2016, we had evidence of special cause variation requiring an elevation of the centerline. However, the PICU iNO usage remained below our targeted goal of 154 hours per patient.
