Supplementary Figure 1. Demographic comparison of the patients included in the study (HDRdb) to the known HIV epidemic, as represented by the HIV and AIDS Reporting System at Public Health England (HARS). Representativity of the study cohort is shown for gender (A), ethnicity (B), reported risk of acquisition (C) and age at diagnosis (D). In (A), the hashed parts of the bars represent the proportion of new diagnoses recorded by HARS (total bar) included in the UK HIV Drug Resistance database.
